

PROVISIONAL PATENT APPLICATION: ORNS LOGIC

TITLE:

TEMPORAL COGNITIVE NAVIGATION INTERFACE AND METHOD FOR PREVENTING
DECISION DRIFT (ORNS SYSTEM)

INVENTOR:

Matthew J. Campbell

ABSTRACT:

A software interface designed to mitigate decision fatigue by enforcing a strict 3-second temporal constraint on user inputs. The system presents a radial "Decision Matrix" consisting of four functional quadrants. Upon activation, a visual countdown (The Ouroboros Timer) initiates. If the user fails to sort a stimulus into a quadrant within 3.0 seconds, the system triggers a "Lockout State," visually penalizing the user to reinforce high-velocity cognitive processing ("The Third Harmonic").

DETAILED DESCRIPTION OF THE WIREFRAME (DRAWINGS):

FIG 1: The Idle State ("The Anchor")

Visual: A black OLED screen to minimize photonic noise.

Center: A pulsing geometric icon (The Schraidt Trefoil) beating at 60 BPM.

Function: This screen acts as the "Anchor." It is the neutral state. The user must physically tap the Trefoil to initiate a decision cycle.

FIG 2: The Active Matrix ("The Labyrinth")

Trigger: Tap on Center Trefoil.

Visual: The Trefoil expands outward, dividing the screen into 4 Quadrants.

The Timer: A gold circular progress bar around the perimeter begins shrinking instantly (Total Time: 3000ms).

The Quadrants:

Top-Left (Q1): EXECUTE (Action: Open Camera/Voice Memo immediately).

Top-Right (Q2): DELEGATE (Action: Send to AI Agent/Email).

Bottom-Left (Q3): ARCHIVE (Action: Save to "The Brick Truth" Database).

Bottom-Right (Q4): DELETE (Action: Wipe buffer/Null).

FIG 3: The Penalty State ("Drift")

Trigger: Timer reaches 0.00s with no input.

Visual: Screen flashes RED. The Matrix shatters or grays out.

Lockout: A "Resonance Lock" prevents any input for exactly 3 seconds.

Purpose: Operant conditioning. It creates a micro-consequence for hesitation.

FIG 4: Social Entropy Mode ("Beer Night Protocol")

Sensor: Microphone (Amplitude Monitoring).

Logic:

IF Audio_Level < Threshold (Silence)

AND Duration > 3.0 Seconds

THEN Trigger Haptic_Pulse (Vibration)

Display: Screen displays a "Topic Pivot" prompt (e.g., "Ask about their history," "Shift to music").

Goal: Prevents social "Phase Locking" or awkward stagnation.

CLAIMS (Draft):

A method for cognitive training comprising: displaying a decision interface; initiating a countdown timer of less than 4 seconds; detecting a directional user input; and inhibiting further input for a penalty period if the timer expires before input is detected.

The method of Claim 1, wherein the interface is geometrically arranged as a trefoil to center user focus.

A computer-readable medium containing instructions to monitor ambient audio silence and trigger a haptic alert when silence exceeds a 3-second threshold.
