

Genesis Document" for UTTERS v1. By locking these specifications, you are creating a system that is scientifically valid, ethically sound, and legally insulated.

Below is the Master Spec that integrates the Titan A16 logic, the 14-Vector System, and the "Black Box" Liability Shield.

UTTERS MASTER SPECIFICATION (v1.0)

Project: Universal Tension & Threshold Evaluation Reporting System

1. MISSION STATEMENT

UTTERS is a descriptive reporting instrument designed to map the "logic weather" of a decision state. It is not a coach, an advisor, or a decision-maker. It is a digital mirror for human agency.

2. THE 14 LOCKED VECTORS (The DNA)

Every analysis must produce a score (1–10) for each of the following:

Time Pressure (Urgency/Deadlines)

Information Completeness (Knowns vs. Unknowns)

Reversibility (Path Permanence)

Resource Load (Energy/Capital/Attention)

Entropy Risk (Probability of Disorder)

Agency Control (User's influence over the process)

Dependency Creation (Reliance on external systems)

Alignment (Coherence with core values)

Variance Tolerance (Requirement for precision)

Feedback Latency (Speed of consequences)

Stake Asymmetry (Upside vs. Downside balance)

Constraint Density (Regulatory/Physical/Legal limits)

Identity Load (Internal psychological friction)

Narrative Lock-In (External social/reputational friction)

3. LEGAL & USER PROTECTIONS (The Shield)

A. Age-Gated Access

Tier 1 (Ages 13–17): Restricted Mode. Limited to academic, career, and low-stakes logic mapping.

Tier 2 (Ages 18+): Full Spectrum Mode.

Parental Consent: Required for all users under 18.

B. The "Force Majeure of Human Choice" Clause

"Human behavior is a high-entropy variable. UTTERS measures environmental constraints, not human intent. The User remains the sole Pilot-in-Command. The System is not liable for outcomes resulting from the User's independent exercise of agency."

C. The Non-Prescription Warranty

"UTTERS generates data, not advice. The output is a Tension Map (Description), not a Directive (Prescription). Use of the app constitutes an agreement that the user is not being 'told what to do' by an AI."

4. THE KILL SWITCH & BLACK BOX (The Vault)

A. The Purge Protocol (User Agency)

Before any real-world action is taken, the app strongly encourages the user to engage the Kill Switch.

Context Wipe: All text, audio, and personal identifiers are instantly deleted from RAM/Storage.

Logic Freeze: The AI "memory" of the conversation is terminated.

Clean Break: Liability transfers 100% to the user the moment the switch is flipped.

B. The Black Box (Post-Action Ledger)

Metadata Only: The system records the 14 vector scores and the timestamp—not the content of the decision.

Sovereign Access: Data is encrypted via Dual-Key (AES-256).

The Subpoena Standard: Data is only released upon a verified, specific Tier-1 Court Order.

The Poison Pill: Any unauthorized attempt to bypass the encryption or "hack" the ledger results in immediate, irreversible data corruption.

5. APP FLOW (V1 BETA)

Onboarding: Acceptance of the "Mirror Doctrine" and Liability Waivers.

Input: User speaks or types the situation (Natural Language).

Extraction: System asks neutral prompts to assign 1–10 scores.

The Map: Display of the Tension Profile (Identifying "Red Zones" like High Entropy + Low Reversibility).

The Finality Prompt: "Analysis Complete. To assume full agency, please engage the Kill Switch."

The Exit: Total wipe of UI. System returns to a blank state.
